

**ALBERTA WATER SYSTEM**  
**Public Water Supply ID: LA1013002**

**RECEIVED**

APR 29 2015

Alberta Water  
System, Inc.

**Consumer Confidence Report**

# 2014 CCR

---

What you need to do:

Step 1: Review base report (numbered pages) for errors.

Surface Water Systems: If you are a surface water system, you must insert the turbidity data.

UCMR 3: If you have received data pertaining to the UCMR 3 list, that data must be included in the CCR Report. Additional information can be found at: [www.dhh.la.gov/ccr](http://www.dhh.la.gov/ccr)

Public Notification: If you have received a public notification insert, the public notice must be submitted with the CCR.

Step 2: Distribute completed report to your customers as outlined on the CCR Certification of Distribution Form no later than June 30, 2015.

Step 3: A completed CCR Certification of Distribution Form including a copy of the final CCR report shall be submitted to the State at the address provided on the form no later than September 30, 2015.

Notes:

This page is not part of your CCR; it is only the instruction page. The pages that are numbered in the upper right hand corner are the report pages.

## The Water We Drink

### ALBERTA WATER SYSTEM Public Water Supply ID: LA1013002

We are pleased to present to you the Annual Water Quality Report for the year 2014. This report is designed to inform you about the quality of your water and services we deliver to you every day (Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien). Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Our water source(s) are listed below:

Source Name	Source Water Type
WELL #5, J.B. LEE	Ground Water
WELL #4, HOLLOWELL	Ground Water
WELL #3, BYRD STATION	Ground Water
WELL #1, ROYTOWN	Ground Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

**Microbial Contaminants** - such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

**Inorganic Contaminants** - such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.

**Pesticides and Herbicides** - which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

**Organic Chemical Contaminants** - including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

**Radioactive Contaminants** - which can be naturally-occurring or be the result of oil and gas production and mining activities.

A Source Water Assessment Plan (SWAP) is now available from our office. This plan is an assessment of a delineated area around our listed sources through which contaminants, if present, could migrate and reach our source water. It also includes an inventory of potential sources of contamination within the delineated area, and a determination of the water supply's susceptibility to contamination by the identified potential sources. According to the Source Water Assessment Plan, our water system had a susceptibility rating of 'MEDIUM'. If you would like to review the Source Water Assessment Plan, please feel free to contact our office.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health. We want our valued customers to be informed about their water

utility. If you have any questions about this report, want to attend any scheduled meetings, or simply want to learn more about your drinking water, please contact SCOTT YARNELL at 318-544-8485.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. ALBERTA WATER SYSTEM is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

The Louisiana Department of Health and Hospitals - Office of Public Health routinely monitors for constituents in your drinking water according to Federal and State laws. The tables that follow show the results of our monitoring during the period of January 1st to December 31st, 2014. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

In the tables below, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

Parts per million (ppm) or Milligrams per liter (mg/L) – one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (ug/L) – one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) – picocuries per liter is a measure of the radioactivity in water.

Nephelometric Turbidity Unit (NTU) – nephelometric turbidity unit is a measure of the clarity of water. Turbidity in excess of 5 NTU is just noticeable to the average person.

Action level (AL) – the concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum contaminant level (MCL) – the "Maximum Allowed" MCL is the highest level of a contaminant that is allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.

Maximum contaminant level goal (MCLG) – the "Goal" is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLG's allow for a margin of safety.

Maximum residual disinfectant level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

During the period covered by this report we had below noted violations of drinking water regulations.

Type	Category	Analyte	Compliance Period
MCL, LRAA	MCL	TOTAL HALOACETIC ACIDS (HAA5)	1/1/2014 - 3/31/2014
MCL, LRAA	MCL	TOTAL HALOACETIC ACIDS (HAA5)	4/1/2014 - 6/30/2014

MCL, LRAA	MCL	TTHM	4/1/2014 - 6/30/2014
MCL, LRAA	MCL	TOTAL HALOACETIC ACIDS (HAAS)	7/1/2014 - 9/30/2014
MCL, LRAA	MCL	TTHM	7/1/2014 - 9/30/2014
MCL, LRAA	MCL	TOTAL HALOACETIC ACIDS (HAAS)	10/1/2014 - 12/31/2014
MCL, LRAA	MCL	TTHM	10/1/2014 - 12/31/2014
PUBLIC NOTICE RULE LINKED TO VIOLATION	PN	PUBLIC NOTICE	8/24/2014 - 1/7/2015
PUBLIC NOTICE RULE LINKED TO VIOLATION	PN	PUBLIC NOTICE	10/17/2014 - 2/26/2015

Our water system tested a minimum of 2 samples per month monthly sample(s) in accordance with the Total Coliform Rule for microbiological contaminants. During the monitoring period covered by this report, we had the following noted detections for microbiological contaminants:

Microbiological	Result	MCL	MCLG	Typical Source
No Detected Results were Found in the Calendar Year of 2014				

In the tables below, we have shown the regulated contaminants that were detected. Chemical Sampling of our drinking water may not be required on an annual basis; therefore, information provided in this table refers back to the latest year of chemical sampling results.

Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
ARSENIC	6/4/2012	1	1	ppb	10	0	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
DI(2-ETHYLHEXYL) PHTHALATE	6/4/2012	3.03	3.03	ppb	6	0	Discharge from rubber and chemical factories
FLUORIDE	6/4/2012	1.6	0.9 - 1.6	ppm	4	4	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories

Lead and Copper	Date	90 <sup>TH</sup> Percentile	Range	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2011 - 2013	0.3	0.1 - 0.3	ppm	1.3	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD	2011 - 2013	1	1 - 2	ppb	15	0	Corrosion of household plumbing systems; Erosion of natural deposits

Disinfection Byproducts	Sample Point	Period	Highest LRAA	Range	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAAS)	FAIR RD	2014	107	0 - 137.1	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAAS)	LAKEFRONT ROAD	2014	109	0 - 148.1	ppb	60	0	By-product of drinking water disinfection
TTHM	FAIR RD	2014	120	3.9 - 176.7	ppb	80	0	By-product of drinking water chlorination
TTHM	LAKEFRONT ROAD	2014	120	2.7 -	ppb	80	0	By-product of drinking

Thank you for allowing us to continue providing your family with clean, quality water this year.

				174.4				water chlorination
--	--	--	--	-------	--	--	--	--------------------

+++++Environmental Protection Agency Required Health Effects Language+++++  
 Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Additional Required Health Effects Language:

Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidneys, or central nervous systems, and may have an increased risk of getting cancer.

There are no additional required health effects violation notices.

+++++

**Thank you for allowing us to continue providing your family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers.**

We at the ALBERTA WATER SYSTEM work around the clock to provide top quality drinking water to every tap. We ask that all our customers help us protect and conserve our water sources, which are the heart of our community, our way of life, and our children's future. Please call our office if you have questions.

# PUBLIC NOTIFICATION INSERT

LA1013002  
ALBERTA WATER SYSTEM

The following public notification was not distributed by the water system and must be added to the consumer confidence report to for the water system to return to compliance with public notification requirements.

## MONITORING, ROUTINE (DBP), MAJOR

Part XII of the Louisiana State Sanitary Code requires the notice to include the following statements:

---

*Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the monitoring period(s) below, the **ALBERTA WATER SYSTEM** did not monitor, did not complete all monitoring, or did not report the results for ROUTINE (DBP), MAJOR, and therefore we cannot be sure of the quality of your drinking water during that time.*

<i>Monitoring Period Begin</i>	<i>Monitoring Period End</i>
09/01/2013	11/30/2013

*This violation occurred because of the failure to collect the required samples from the water system's distribution system.*

*Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.*

*Necessary action has been taken to prevent this violation from recurring.*

---
